

IICSR Group

Sustainability expertise.
Practical impact.

PORTFOLIO OF WORK | 2010-2026

International Net Zero Summit 2026, Goa, India - delegates and organisers.

Founded in 2010, IICSR Group brings together sustainability education, research, advisory and implementation. We equip professionals, strengthen organisations and connect leaders across business, government, academia and communities.

Education, expertise and execution

International Institute of Corporate Sustainability and Responsibility

IICSR develops sustainability leaders and helps organisations translate knowledge into action. Its work spans professional education, research, advisory, convening and implementation partnerships.

10,000+

professionals trained

100+

courses

90+

faculty network

Leadership

Harsha Saxena, Founder & CEO, leads IICSR Group. Faculty, advisers and specialist practitioners contribute experience from business, academia, social impact and public institutions.

Accreditations

American Council of Training and Development (ACTD), USA

European Association for Higher Education Advancement (EAHEA)

Management & Entrepreneurship and Professional Skills Council (MEPSC), under the Ministry of Skill Development and Entrepreneurship, Government of India

Institutional presence

Registered entities in India and the USA, with learning programmes and professional engagements across international markets.

Scale: IICSR Group institutional figures. Accreditation and team information: iicsr.com.

Developing sustainability professionals

IICSR builds professional capability across the decisions that shape responsible business: strategy, reporting, climate action, social impact, governance and finance.

Certified ESG Practitioner programme - induction panel and professional learning.

Professional pathways

Practitioner certifications and extended programmes cover ESG, CSR and sustainability, Net Zero, carbon markets, reporting, sustainable finance and related disciplines. Learning combines conceptual foundations with applied assignments and practitioner perspectives.

Flexible learning

Live online cohorts, recorded courses and focused in-person workshops make specialist education accessible to working professionals. The public catalogue includes multiple batches and recorded editions; the programme index in this portfolio preserves that breadth.

Applied expertise

Faculty and guest speakers bring experience from industry, research, public policy and implementation. Programme-specific teaching teams connect the curriculum to the problems participants encounter at work.

Strengthening organisations from within

Corporate learning equips teams to make informed decisions, work across functions and carry sustainability priorities into daily operations.

Sustainability Dialogues with Kalpataru, Mumbai, India, August 2025.

Executive engagement

Board and leadership sessions can establish a common understanding of business exposure, responsible growth and the governance required to act.

Technical capability

Team programmes address ESG frameworks, GHG accounting, reporting, climate risk, supply chains and finance. Live instruction can be combined with self-paced learning and case discussions.

From learning to application

Assignments can be scoped around client priorities, from internal capability gaps to project design and implementation support. Clear objectives, relevant experts and an agreed work plan define each engagement.

Rooted in community experience

IICSR's history begins with grassroots action through Ekjaa Foundation. That experience informs our approach to education, responsible business and inclusive development.

Achala Library inauguration, Goregaon, Mumbai - Ekjaa Foundation.

Early community work

Women's empowerment, digital literacy, educational support, book distribution and medical aid formed part of the early work in India. These initiatives preceded the establishment of the IICSR institution in 2015.

IICSR Foundation

The Foundation connects sustainable solution providers, investors, researchers, institutions and practitioners. Its focus includes climate action, social equity, impact measurement and informed collaboration.

Execution with context

Community priorities and implementation conditions matter alongside business objectives. Our work links learning, stakeholder engagement and partnerships to the practical requirements of a project.

International Net Zero Summit

The International Net Zero Summit 2026 brought corporate pathways, research, practitioner learning and climate innovation together in Goa.

International Net Zero Summit 2026, Goa - recognition and awards ceremony.

Goa | 22-24 January 2026

Held at Taj Vivanta, Panjim, the summit combined a Net Zero Strategist workshop, corporate presentations, research, awards and opportunities for professional exchange.

Industry, skills and policy

IICSR worked with MEPSC and the Goa Chamber of Commerce and Industry to bring complementary perspectives to the programme. The forum connected industry requirements with workforce capability and climate action.

A continuing knowledge platform

The Net Zero Compendium, research contributions and award programme extended the summit beyond the event itself. They provide material for continued learning and dialogue on implementation.

CSO roundtables: priorities for action

IICSR convenes sustainability leaders and solution providers to examine the barriers between organisational commitments and implementation.

IICSR-GCCI CSO Roundtable, Goa, September 2026 - industry and institutional dialogue.

Bengaluru | August 2026

The IICSR-NAB CSO Roundtable focused on Net Zero integration, climate-tech innovation, industry needs and the skills required for delivery.

Goa | September 2026

The IICSR-GCCI dialogue connected corporate leaders, policymakers, institutions and innovators. Themes included clean energy, climate-tech adoption, financing and the practical conditions for progress.

A forum for collaboration

Roundtables offer a focused setting to share operational experience, identify capability gaps and explore partnerships. Their value lies in the specificity of the questions and the relationships formed around them.

Learning and dialogue across markets

IICSR's North American engagements connect professional learning with business, technology and sustainability communities.

AI and Sustainability, Palo Alto, May 2026 - panel discussion.

United States and Canada

Public programmes and event listings span Palo Alto, San Francisco, New York, Miami and Toronto, alongside other US engagements. Topics include the SDGs, Net Zero, climate governance and green technology.

AI and sustainability

The May 2026 Palo Alto programme explored AI and sustainability through industry perspectives and practical discussion. IICSR also participated in the San Francisco Climate Week conversation on sustainable AI infrastructure, policy and regulation.

Professional connections

Sustainability Dialogues create space for local experience and international perspectives to meet. IICSR's USA platform reports four major training projects and more than ten events across North America.

Circularity, innovation and exchange

European engagements bring sustainability education into conversation with circular business models, digital innovation and regional practice.

Vienna visit and Sustainability Dialogues, September 2025 - from Harsha Saxena's coverage.

Sustainability Dialogues

IICSR's Europe coverage includes Vienna, Zurich, Amsterdam, Milan and Venice. These engagements connect professionals, entrepreneurs and institutional networks around responsible business.

Digital transformation

The European programme portfolio includes Digital Transformation and Product Innovation for Sustainability and Circularity, connecting product lifecycle thinking with digital tools and business change.

Cross-market learning

European dialogue adds perspectives on circularity and emerging product frameworks. The portfolio includes Vienna photographs from Harsha Saxena's public account and programme material published by IICSR.

Connecting ideas, expertise and investment

IICSR's convening work includes platforms where entrepreneurs, investors and sustainability practitioners can exchange knowledge and develop relationships.

Next Step, Season 1 - impact entrepreneurship programme, 2016.

Next Step

The 2016 and 2021 editions created a platform for impact entrepreneurship. The programme sits within IICSR's longer history of supporting socially and environmentally focused enterprise.

International Responsible Investors Network

IRIN brought responsible investment into the institutional dialogue, with activity documented in 2020 and 2023. Investment themes also feature in learning programmes on impact investing and sustainable finance.

Climate-tech engagement

Current collaboration opportunities include connecting climate-tech ventures with relevant industry and investor networks, exploring pilots and presenting solutions through forums. Each opportunity depends on a defined partner need and agreed scope.

Technology as a field of practice

IICSR explores AI both as a subject for sustainability leadership and as a means of extending access to professional learning.

AI and Sustainability, Palo Alto, May 2026 - speakers and programme organisers.

Executive programmes

The 2026 AI and sustainability workshops in Palo Alto and Mumbai brought together technology, ESG and business perspectives. Topics ranged from responsible adoption to organisational application.

Professional learning

The course portfolio includes applications of AI in sustainability, ESG and technology strategy, digital circularity, Web3 and carbon blockchain themes.

Lynera.ai

Lynera.ai is IICSR's technology-enabled learning initiative. Its direction combines conversational learning and enterprise training with an interest in learning analytics and the environmental footprint of digital education.

Making knowledge accessible

IICSR combines practitioner education with publications, case studies and dialogue that make specialist knowledge available to a wider professional community.

Jindal Stainless SROI studies - community consultations and field research.

Books and learning resources

The IICSR book series and course materials cover subjects such as CSR and sustainability, BRSR, sustainable finance and carbon markets. Recorded programmes provide another route into the same professional themes.

Net Zero research

The Net Zero Compendium and summit research bring corporate and academic perspectives together. Case-based material helps readers compare approaches and examine the assumptions behind a proposed transition.

Continuing exchange

Sustainability Express, the knowledge library, interviews with global changemakers and public event reports extend the conversation between cohorts and events.

Learning beyond the programme

IICSR's community connects learners, experienced practitioners and organisations through continuing access to knowledge and professional exchange.

BMA-IICSR Sustainability Dialogues and certificate ceremony, Mumbai, December 2025.

Alumni and careers

Alumni engagement, the jobs portal, practitioner groups and Sustainability Dialogues create opportunities to remain connected after a course.

Global changemakers

The interview series brings leaders and specialists into public conversations on CSR, ESG, finance, climate action and social impact. Online events broaden access across geographies.

New professional initiatives

Professional licences, the Green Circle directory and climate-tech connections extend the Group's current development agenda. These initiatives are distinct from the historical project and event record presented in this portfolio.

Work with IICSR

We collaborate with companies, educational institutions, industry bodies, public agencies and solution providers across sustainability priorities.

BMA-IICSR Sustainability Dialogues, Mumbai, India, December 2025 - certificate ceremony.

Build talent and capability

Commission executive sessions, technical team training, practitioner pathways or licensed learning content aligned with your organisation's needs.

Convene and contribute

Co-host a leadership forum or CSO roundtable. Contribute research, speakers, case studies or exhibits to the International Net Zero Summit and related knowledge platforms.

Advance implementation

Explore advisory assignments, stakeholder programmes, climate-tech pilots and community initiatives. IICSR brings subject expertise and convening capability; delivery arrangements are agreed around the objectives of each partnership.
